1. An image recording medium, comprising:

an image recording area in which an image signal can be recorded, the image signal being subjected to a plurality of image correction processes in a process order; and

an information recording area in which data indicating the process order, in which the image correction processes are performed, is recorded.

2. An image signal process order device that processes a corrected image signal obtained by performing a plurality of image correction processes to an image signal in a process order, comprising:

a process order determining processor that determines the process order; and

an image signal restoring processor that performs restoration processes to the corrected image signal to restore the image signal, the restoration processes being performed in a restoring order which is the reverse of the process order.

3. An image signal process order system, comprising:

an image correcting processor that performs a plurality of image correction processes to an image signal in a process order to generate a corrected image signal;

an image signal recording processor that records the corrected image signal in a recording medium;

a process order recording processor that records the process order in the recording

medium;

a process order reading processor that reads the process order from the recording medium; and

an image signal restoring processor that performs restoration processes to the corrected image signal to restore the image signal, the restoration processes being performed in a restoring order which is the reverse of the process order.

4. The image signal process order device of claim 2, wherein data indicating the process order is recorded in an information recording area of an image recording medium, and the image signal is recorded in an image recording area of the image recording medium.

5. The image signal process order device of claim 2, further comprising an image recording medium that includes an image recording area in which the image signal can be recorded, and an information recording area in which data indicating the process order is recorded.

6. The image signal process order system of claim 3, wherein data indicating the process order is recorded in an information recording area of the recording medium, and the image signal is recorded in an image recording area of the recording medium.
